PHP Contact Form

Reference: IBDHost

Required: A PHP host that does NOT block mail() (safe_mode must be OFF).

Step 1: Copy and paste the e-mail Form Code into a new page called 'contact.php'(must be a html/php page on a server that allows php).

Step 2: Copy and paste the sendmail.php code into a new file. Change the \$myemail Variable to include your email address. Then check (or modify) the link at the bottom (contact.php) to point to the desired Home Page. Save the file as 'sendmail.php' (as ASCII file).

Step 3: Upload both files as ASCII i.e. upload the same way as .html files. Be sure both files are in the same folder on the server.

NB: You must modify the email address and home page address

E-mail Form Code

```
<html>
<head>
<title>Email Form </title>
</head>
<body>

<form method="POST" action="sendmail.php">

<!-- DO NOT change ANY of the php sections -->
<?php
$ipi = getenv("REMOTE_ADDR");
$httprefi = getenv ("HTTP_REFERER");
$httpagenti = getenv ("HTTP_USER_AGENT");
?>

<input type=hidden name="ip" value="<?php echo $ipi ?>">
<input type=hidden name="httpref" value="<?php echo $httprefi ?>">
<input type=hidden name="httpagent" value="<?php echo $httpagenti ?>">

Your Name: <input type=text name="visitor" size="35">
<br>
Your Email: <input type=text name="visitormail" size="35">
<br><br>
Mail Message:
<br>
<textarea name=notes rows=4 cols=40></textarea>
<br>
<input type=submit VALUE="Send Mail">
</form>

</body>
</html>
```

Code for sendemail.php

```
<html>
<head>
<title>Sendemail Script</title>
</head>
<body>

<!-- You must enter YOUR email address ($myemail shown below).
Then you should check (or modify) the link for the 'next page' (at the bottom) -->

<?php
                                $myemail = "your@email";

if (!isset($visitormail))
echo "Somebody Goofed $ip" ;

$todayis = date("l, F j, Y, g:i a") ;

$subject = "Visitor Mail" ;

$message = " $todayis [EST] \n
Message: $notes \n
From: $visitor ($visitormail)\n
Additional Info : IP = $ip \n
Browser Info: $httpagent \n
Referral : $httpref \n
";

$from = "From: $myemail\r\n";

if ($myemail != "")
mail($myemail, $subject, $message, $from);

?>

<b><p align=center>
Date: <?php echo $todayis ?>
<br>
Thank You : <?php echo $visitor ?> ( <?php echo $visitormail ?> )
<br>
<?php echo $ip ?>

<br><br>
<a href="index.php"> Return to Home Page </a>

</body>
</html>
```
